Like many college students, Jose Juarez carries around a pocket-sized computer that lets him watch movies, surf the Internet and text-message his friends.来源：考试大 Hes part of "Generation M" - those born after 1985 who 51 up connected to everything from video game to cellphones. "For us, its everyday life," said Juarez, 18, a freshman 52 California State University at Sacramento (CSUS). 53 , educators are now saying that not all Generation M-ers can synthesize the piles of information theyre accessing. "Theyre geeky, but they dont know what to 54 with their geekdom," said Barbara OConnor, a Sacramento State communications studies professor who has been involved in a nationwide 55 to improve students computer-research skills. In a recent nationwide test to 56 their technological "literacy" - their ability to use the Internet to complete class assignments - only 49 percent correctly evaluated a set of Web sites for objectivity, authority and timeliness. Only 35 per cent could correctly narrow an overly 57 Internet search. About 130 Sacramento State students, including Juarez, participated in the experimental test, 58 to 6,300 college students across the country. The hour-long assessment test is conducted by Educational Testing Service. It is a web-based scavenger hunt (拾荒游戏) 59 simulated Internet search engines and academic databases that spit out purposely misleading information. "Theyre very good at 60 in and using the Internet, but

dont always understand what they get back," said Linda Goff, head of instructional services for the CSUS library. "You see an open search box, you type in a few words and you 61 the button," said Goff, who is involved in the testing. "They take at face value 62 shows up at the top of the list as the best stuff." Educators say that these sloppy research skills are troubling. "We look at that as a foundational skill, in the same way we 63 math and English as a foundational skill," said Lorie Roth, assistant vice-chancellor for academic programmes in the CSU system. Measuring how well students can "sort the good 64 the bad" on the Internet has become a higher priority for CSU, Roth said. CSU is considering 65 a mandatory assessment test on technological literacy for all freshmen, much as it has required English and math placement tests since the 1980s. Students in freshman seminars at Sacramento State were asked to take the test early in the semester and were expected to finish another round this week to measure their improvement. 51. A) brought B) built C) stood D) grew 52. A) about B) near C) at D) near 53. A) Besides B) However C) In addition D) Of course 54. A) do B) work C) make D) deal来源 : www.examda.com 55.
