，通过课程学习，可以得到3-4分，为了提高广大考生的阅读判断能力，百考试题特整理了以下“职称英语考试理工A级阅读判断练习”资料，供考生复习。

Plants in Desert Only special plants can survive the terrible climate of a desert , for these are regions where the annual range of the soil temperature can be over 75 . Furthermore , during the summer there are few clouds in the sky to protect plants from the sun's ray. Another problem is the fact that there are frequently strong winds which drive small , sharp particles of sand into the plants , tearing and damaging them. The most difficult problem for all forms of plant life , however , is the fact that the entire annual rainfall occurs during a few days or weeks in spring. Grasses and flowers in desert survive from one year to the next by existing through the long , hot , dry season in the form of seeds. These seeds remain inactive unless the right amount of rain falls. If no rain falls , or if insufficient rain falls , they wait until the next year , or even still the next. Another factor that helps these plants to survive is the fact that their life cycles are short. By the time that the water from the spring rains disappears just a few weeks after it falls such plants no longer need any. 本文来源:百考试题网 The perennials have special features which enable them to survive as plants for several years. Thus , nearly all desert perennials have extensive root systems below ground and a small shoot system above

ground. The large root network enables the plant to absorb as much water as possible in a short time. The small shoot system , on the other hand , considerably limits water loss by evaporation. Another feature of many desert perennials is that after the rainy season they lose their leaves in preparation for the long , dry season , just as trees in wetter climates lose theirs in preparation for the winter. This reduces their water loss by evaporation during the dry season. Then , in next rainy season , they come fully alive once more , and grow new branches , leaves and flowers , just as the grasses and flowers in desert do.

16. Ordinary plants are unable to survive in the desert mainly because of the changeable weather. A. Right B. Wrong C. Not mentioned

17. Grasses and flowers in desert are able to survive because they stay in the form of seeds to wait for the right amount of water to come. A. Right B. Wrong C. Not mentioned

18. Grasses and flowers in the desert whose life cycles are short shows their ability to adapt to the quick disappearance of rainwater there after it falls in spring. A. Right B. Wrong C. Not mentioned

19. Winter is the toughest season for grasses and flowers to survive in desert A. Right B. Wrong C. Not mentioned

20. The shoot system of perennials can help the plants absorb less of the sun's rays. A. Right B. Wrong C. Not mentioned

21. The theme of the second last paragraph is why the perennials can survive as plants for several years. A. Right B. Wrong C. Not mentioned

22. Desert perennials lose their leaves after the rainy season just as trees lose theirs in wetter climates before winter arrives , but the reasons for this feature are different. A. Right B. Wrong C. Not mentioned

【参考答案】 16.

B17. A18. A19. C20. B 21. A22. B 相关推荐：[#0000ff>2011职英理工阅读理解背诵模板汇总](#) [#0000ff>2011年职称英语考试重点语法及知识点总结](#) [#0000ff>2011年职称英语理工A类考试阅读判断练习汇总](#) 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
