In a purely competitive market, the supplier of goods and services has no control over the market price, because he produces too little to influence market conditions. With no difference between his products and the products __1__ his competitors, he will sell nothing if he charges above the market price and he will sell all if he charges at or __2__ the market price. However, in considering the price, he must take cost of production __3__. There are times when he may be willing to sell below his cost. This might happen when prices tumble for __4__ a short time. However, no business person can __5__ lose money for a prolonged period. He must __6__ of his costs in relation to the market price if he is to compete successfully and earn a profit. Many people have the impression that as production increases, costs per unit decrease. __7__ mass production has made this true in certain industries and at certain levels of production, __8__ logic and practical experience have shown that costs per unit begin to rise beyond a certain level of production. Some economists __9__ this principle as the law of increasing costs. The reason __10__ rise as production goes up is complex. However, it is easy to recognize that as production goes up, the need for additional factors of production

will also grow, resulting ___11___ competitive bidding in the marketplace for the factors of production. If a producer needs ___12___ skilled labor to produce more, and none of this labor is unemployed, the producer will have to get ___13___ from other sources. This can be done by ___14___ higher wages. Higher bidding would also apply to the other factors of production. We must also recognize that not all labor is equally productive, ___15___ not all land is equally fertile and not all ore is equally rich in the mineral wanted.
