Compare the contributions of artists to society with the contributions of scientists to society. Which type of contribution do you think is valued more by your society? Give specific reasons to support your answer. Art and science are essentially a strange coupling. More often than not, they are considered as divergent rather than consistent with each other. The Artist employs image and metaphor. the scientist uses number and equation. By casual juxtaposition, these two fields seem to have little in common: There are few if any references to art in any standard textbook of science. art historians rarely interpret an artists work in light of the conceptual framework of science. Despite what appear to be irreconcilable differences, however, they do have at least one thing in common --- both of them have significant contribution to the society, either through probably distinctive way. The development of science and technology has always accompanied the progress of the society. The invention of the steam engine brought a new era of thrift of world economy. the employment electricity has multiplied the productivity and virtually reproduced limited resources on the Earth. the innovation of computer technologies has made the Earth a little village and connected distant countries as a single market. While sometimes the progress of science and technology, for example, technology of human cloning, cause

troubles or originate dilemmas, it seems always undeniable that in a broad sense, the development of science has provided people a much higher standard of living than that of their counterparts in any phrase of the history. 100Test 下载频道开通，各类考试题目直接下载。详细请访问 www.100test.com
